- Sandy palm surface has excellent grip, particularly to slippery objects handling.

Applications:

- Maintenance.
- Mining.
- Construction.
- Logistics & Materials handling.
- Oil & Gas Industry.

TPR Impact Protection

Environmentally friendly soft & flexible TPR (Thermoplastic Rubber) pads on the back of the hand provide protection from accidental knocks.

Nitrile Foam

This coating is applied by spraying the glove shell with Nitrile particles allowing this porous coating to become breathable for greater comfort. Good all round grip in dry or wet environments.

WARNING: No glove provides complete cut protection against sharp objects and/or impact protection against knocks, care should still be taken when handling sharps or heavy objects.
